

QlikView

QlikView: Simply Revolutionary Business Intelligence

QlikTech is the world's fastest growing BI company three years running, according to IDC's most recent report, "Worldwide Business Intelligence 2005 Vendor Shares". Why is QlikTech growing at over 80% per year? QlikView allows you to examine – then improve – any and every aspect of your business *today*. Not next quarter. Not next year. *Today*. QlikView is simple to adapt, quick to deploy and easy to use, giving you the intelligence you need for faster and smarter business decisions. QlikView is a truly one of a kind solution, offering:

Lightening Fast Response Rates – Full in-memory processing gives immediate query response—no matter how complex the query, even with data volumes as large as a billion records.

Unparalleled Flexibility – QlikView does not require a data warehouse, so users can quickly correlate data from multiple sources, and add new data sources in a matter of minutes. In addition, one QlikView can replace hundreds of reports and cubes.

Unsurpassed Scalability – QlikView offers immediate access to hundreds of millions of records at the click of a mouse, including *drill down all the way to the transaction level*.

The QlikView Difference

QlikView provides fast, powerful and *visual* in-memory business analysis – without the limitations, cost or complexity of traditional BI tools. QlikView can be deployed in *days* and users trained in *minutes*. Designed specifically for business users, QlikView puts information at your fingertips instantly, giving you the intelligence you need to act – faster.

QlikView was created with a simple premise: analysis should work the way your mind does. We call this QlikView Associative Logic.

Association more closely mirrors the way the human mind works – people think in a non-linear path driven by building associations.

We operate on the right side of the law -- Moore's Law. With each generation of processor platform, QlikView can handle more and more data.

Today, with general availability of 64-bit multi-core systems, there is virtually no limit to what you can do with QlikView.

Seeing is Believeing

QlikView allows you to gain unprecedented insight into all aspects of your business at the click of a button:

- High level overview of KPI performance to targets.
- Immediately identify problem areas impacting KPI's.
- Quickly identify trends in KPI's.
- Know which channels, sales reps, customers, and products are performing, and which ones aren't.
- Review cost center performance to budget.
- Monitor stock turns, are they meeting target?
- Drill down to individual orders to identify exceptions.
- A single version of the truth to align corporate goals with departmental strategies.

QlikView is a platform for building analytics applications for just about any business function from any selection of data sources. With QlikView, your company can develop and deploy applications tailored to your specific business and data requirements, faster and more efficiently than you can install a "pre-packaged" OLAP-based BI solution.

QlikView can work with virtually any available data source, including but not limited to SAP, Oracle, Peoplesoft, JD Edwards, Movex and BPCS. Regardless of your data sources, QlikView applications can be deployed in just days, even with significant customization. QlikView customers can pull data from different systems together into powerful, easy to use analytics applications—all in a fraction of the time required for competing solutions.

Regardless of your business requirements, QlikTech and QlikTech's partners build custom-tailored applications for customers in all industries—and across all business functions. Contact us to find out how QlikView applications can help your business.

QlikView New Rules

QlikView's innovative approach results in significant benefits for our customers

Fast Implementation - Customers are live in less than 30 days, and most in a week

Easy to Use - End users require no training and enjoy "qliking" through the application

Powerful - Near instant response time on data volumes as high as a billion records across thousands of users

Flexible - Allows unlimited dimensions and measures and can be modified in seconds

Integrated - Dashboards, analysis and reporting in a single solution and on a single architecture

Low Cost - Less costly, shorter implementations result in fast return on investment

Risk-Free - Fully-functional free trial download, and a seeing-is-believing experience
